

Supporting appendix
to the paper
International Conflict, International Security
Environment, and Military Coups
(not for publication)

This document presents the results of statistical models that I conducted but, due to space constraints, was not able to report in the paper.

Contents

A1 List of variables A-2
A2 Justification for control variables A-3
A3 Summary statistics A-4
A4 Cross-correlation table A-5
A5 Using a indicator for any MID (or any ICB crisis) A-6

A8 Adding separately conflict outcomes 2 A-9
A9 Using Alternative measures of threat environments A-10
A10 Using Fatal MIDs A-11
A11 Effect of defeat/stalemate in major international crises A-12
A12 Adding military size and military spending per soldier A-13
A13 Adding military regimes A-14
A14 Adding inequality and its squared term A-15
A15 Excluding most control variables A-16
A16 Estimating fixed-effects logit models A-17
A17 Estimating random-effects logit models A-18
A18 Only countries having experienced coups A-19
B1 Descriptive look at data A-20

Variables	Definition/operationalization	Data Source
Interstate Conflict Events		
MID participation	hostility level of dispute > 1 (No militarized action), $t - 1$	Revised MID4 data (Gibler, Miller, and Little, 2016)
Force MID	hostility level of dispute ≥ 4 (Use of force), $t - 1$	Revised MID4 data (Gibler, Miller, and Little, 2016)
Fatal MID	fatality level > 0 , $t - 1$	Revised MID4 data (Gibler, Miller, and Little, 2016)
ICB crisis	The extent of violence > 1 (No violence), $t - 1$	ICB data
Interstate war	dummy for ongoing interstate war, $t - 1$	Revised war data (Reiter, Stam, and Horowitz, 2016)
Conflict duration	counter variable beginning at the first year of a MID and ending in the last year that a given country is coded as engaged in a MID involving the use of force.	Revised MID4 data (Gibler, Miller, and Little, 2016)
Interstate Conflict Events		
Interstate relationship	averaged peace scale with neighbors, $t - 1$	Goertz, Diehl, and Balas (2016)
Geopolitical competition	continuous measure of geopolitical competition, $t - 1$	Markowitz and Fariss (2017)
Strategic rivalries	dummy for ongoing strategic rivalries, $t - 1$	Thompson and Dreyer (2011)
Interstate rivalries	dummy for ongoing interstate rivalries, $t - 1$	Klein, Goertz, and Diehl (2006)
Spatial rivalries	dummy for ongoing spatial rivalries, $t - 1$	Thompson and Dreyer (2011)
Territorial claims	dummy for ongoing territorial claim rivalries, $t - 1$	ICOW data
Territorial disputes	dummy for ongoing territorial dispute, $t - 1$	Huth and Allee (2002) & Gibler and Tir (2014)
Dependent or control variables		
Coup attempt	dummy for coup attempts in a country-year	Powell and Thyne (2011)
Successful coups	dummy for successful coup attempts in a country-year	Powell and Thyne (2011)
Past coups	the number of coup attempts in the last ten years	the author's calculation using Powell and Thyne (2011)
Civil conflict	dummy for ongoing civil conflict, $t - 1$	the UCDP/PRIO Armed Conflict Dataset (Gleditsch et al., 2002)
Democracy	dummy for democracy, $t - 1$	Boix, Miller, and Rosato (2013)
GDP per capita	Log-real GDP per capita, $t - 1$	Graham and Tucker's (2017) dataset combining the World Development Indicators with from the Penn World Tables.
GDP growth	GDP per capita growth (annual %) , $t - 1$ of	Graham and Tucker's (2017) dataset combining the World Development Indicators data with data from the Penn World Tables.
Post-Cold War	dummy for years > 1991	the author's calculation
t	the number of years since the last coup	the author's calculation

Table A1. List of variables.

Variables	Justification for the inclusion
Past coups	Previous studies have documented that coups are more likely to occur in countries with a previous history of coups, a phenomenon called as the “coup trap” (Londregan and Poole, 1990; Belkin and Schofer, 2003).
A cubic polynomial of year since the last coup in the country	The same reason as above and to control for duration dependence (Beck, Katz, and Tucker, 1998).
Civil conflict	civil conflicts may be correlated with coups as well as interstate conflict.
GDP per capita & GDP growth	The level of economic development and economic growth are also known as significant determinants of coups (Kim, 2016; Londregan and Poole, 1990).
Democracy	A country’s political regime type is also known as an important factor (Bell, 2016).
Post-Cold War	Western powers began to promote free elections and democracy and became less tolerant of coups since the end of the Cold War (Marinov and Goemans, 2014).

Table A2. Justification for control variables

Variable	Obs	Mean	Std. Dev.	Min	Max	P50
Interstate relationship	7197	.51	.1	.04	.92	.5
Geopolitical competition	5619	.48	.25	.12	1.17	.6

Table A11. Effect of defeat/stalemate in major international crises. Robust standard errors clustered at the country level are in parentheses: $+p < 0.1$, $*p < 0.05$, $**p < 0.01$.

White (2017) coded a major international crisis as one if a country experienced an international ICB crisis that ended in defeat or stalemate where the level of violence reached “Serious clashes” or the gravity of the crisis rose to the threat of “Grave damage” or a “threat to existence.” He also included interstate wars that ended in stalemate or defeat, according to the COW data, in the coding.

Table A18. Only countries having experienced coups. Robust standard errors clustered at the country level are in parentheses: $+p < 0.1$, $*p < 0.05$, $**p < 0.01$.

Figure B1. Annual probability of coup attempts by external threat type. The vertical line segments associated with each dot present the 95% confidence intervals. Hostile relation and geopolitical competition is originally a continuous measure. Thus, “Yes” indicates their values being greater than their means, and “No” means being lower than their means. Prolonged MID is a binary indicator for whether conflict duration is longer than four years (the 90th percentile of the variable) or not.

Figure B1 examines the bivariate relationship between each measure of external threats and the unconditional probability of coup attempts: The top graphs look at immediate and acute threats posed by militarized conflict or interstate wars, while the bottom graphs look at sustained and chronic threats driven by the structural external environment. The figure presents prima facie evidence that the two types of external threats differently affect coups. Ongoing militarized conflict does not significantly affect coup risk, and interstate wars or prolonged MIDs reduce it. Contrarily, hostile security environments consistently heighten coup propensity regardless of how I measure the international security environment.
